Mike DeAcosta

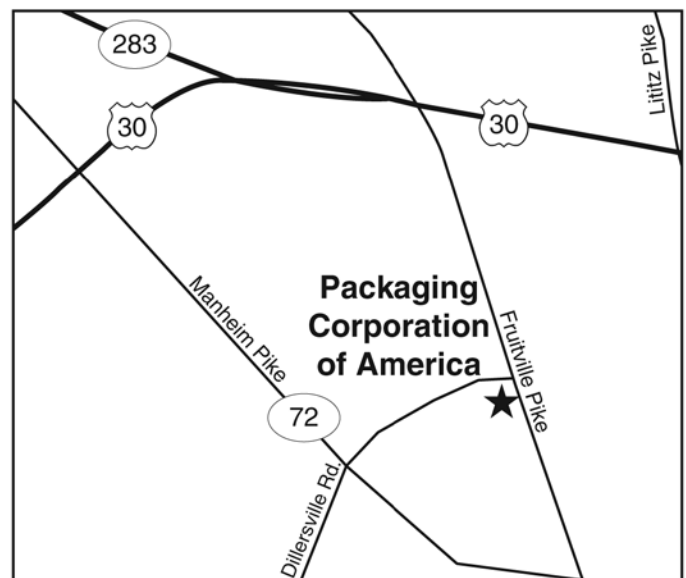

Packaging Corporation of America (PCA) is a world-class manufacturer of containerboard and corrugated packaging. Our focus on a single line of business not only differentiates us from our major competitors, but also helps us achieve levels of operational excellence that are highly respected within the industry.

With 2008 net sales of \$2.4 billion and 8,100 employees, PCA produced 2.35 million tons of containerboard and shipped 30.3 billion square feet of corrugated products. Our 67 converting operations, located strategically across the country, produce a wide variety of corrugated packaging products. This includes conventional shipping cartons, large triple wall bulk containers, wax coated boxes, and multi-color boxes and displays with strong visual appeal that helps merchandise packaged products in retail locations.

We have a strong local presence in South Central and Eastern Pennsylvania with converting plants in Lancaster, Hanover, Trexlertown, and Allentown. Additionally, our Design Centers in Lancaster and Trexlertown work with customers every day to provide a significant competitive edge in creative and protective corrugated packaging.

We have a wide variety of equipment available to meet the needs of our local customer base. We can direct print up to six colors, die cut large blank sizes, and produce different thickness of corrugated material that match the required application. Also, we have several machines that can laminate offset press sheets to corrugated.

We currently work closely with several members of the SLC on their packaging needs. We welcome the opportunity to learn more about your business, and how we can help!
