6:30 pm  
—this event is alcohol free

### Cost

\$25 - members  
\$35 - guests  
\$15 - students

### RSVP

November 15 by noon at  
[slcreservation@gmail.com](mailto:slcreservation@gmail.com)

Thaddeus Stevens College of Technology's Graphic Communications and Printing program's curriculum requires pencils, wrenches, sketch-pads, cameras, keyboard shortcuts, and buckets of ink as students are immersed in real-world projects that provide them opportunities to find their strengths and refine their skills. Students from all backgrounds learn the principles of graphic design, and the role it has in supporting marketing and communications through various channels ranging from web to print.

At the same time, students learn about the vast opportunities within the printing industry. Students will have first-hand experiences with several printing processes, including operation of the lab's Heidelberg VersaFire digital press or the HP 315 Latex. These experiences are a blend of class projects, live work and personal projects.

Students also gain an understanding of the roles in print manufacturing as second-year students overseeing production of The Great Commoner Press, the inhouse print facilities for the College. Students engage with the campus community by designing and producing live work for the College. These projects include the President's Holiday Card, The College yearbook, and admissions materials.

Please be sure to join us to visit the lab and meet our current students.
